## NightVision CCTV light intensifiers

Our NightMate and IntelliVu CCTV light intensifiers enable your existing CCTV camera system to produce images under starlight or ultra low light conditions. The IntelliCam is a fully integrated camera and light intensifier system.

**IntelliCam** - Night vision camera system (24 hour operation). Fully integrated B&W or color CCD camera with rotation light intensifier. color is sensitive to 0.001 lux and B&W is sensitive to 0.0001 lux.

**NightMate** - light intensifier (night time only). Recommended for use during night time operations only, it provides images with resolution in excess of 450HTVL. It is sensitive to 0.00001 lux.

**IntelliVu** - light intensifier (24 hour operation). Rotational light intensifier. A light sensor commands the intensifier to rotate into the optical path during the night time and outside the optical path during day time operations, for use with B&W or color CCD cameras. It is sensitive to 0.000001 lux.

*Generations:*  
At the center of all night vision devices is the light intensifier tube.  
This tube creates the light amplification process.

X

A line drawing of a tooth section showing a cavity in the upper left. A dental instrument, likely a probe or mirror, is inserted into the cavity. The root of the tooth is visible on the right.
